Summary

Frontend Engineer specializing in React, TypeScript and Next.js, with 5 years of experience building production web applications, data-intensive dashboards and real-time interfaces. Experienced in frontend architecture, performance optimization, API integration, testing and reusable component systems.

Technical Skills

- 🔗 **Frontend Development:**
HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js, Tailwind CSS, Responsive Web Design, Component-Based Architecture, UI Development
- 🔗 **Mobile Development:**
Dart, Flutter, Cross-Platform Mobile Development, Responsive Mobile UI, Flutter State Management
- 🔗 **Backend Development:**
Node.js, Express.js, REST APIs, API Integration, Authentication & Authorization
- 🔗 **State Management & Data:**
Zustand, TanStack Query, WebSockets, Client-Side State Management, Server State Management, Local Storage, Provider
- 🔗 **Testing, Accessibility & Performance**
Jest, Unit Testing, Accessibility (WCAG), Semantic HTML, SEO Optimization, Web Performance Optimization, Lighthouse
- 🔗 **Tools & Workflow:**
Git, GitHub, npm, Vite, Chrome DevTools, VS Code, Agile Development, Debugging, Code Review
- 🔗 **Additional:**
Payment Integration, Third-Party API Integration, Responsive Design, Cross-Browser Development

Work Experience

- 🔗 **CreatorRealm** Remote
Frontend Engineer . Contract April 2026 - July 2026
Engineered responsive, production-ready product experiences using React, TypeScript, Tailwind CSS, and custom CSS, including custom animations and interactive designs across multiple pages and the landing page.
Architected a multi-role real-time chat application with role-specific client and creator experiences, synchronized conversations, chat history, unread-message indicators, and responsive navigation.
Built advanced chat productivity features including an in-chat calculator, calendar, contextual shortcuts, profile access, proposals, jobs, contracts, location, and ratings.
Integrated REST APIs and real-time services across onboarding, notifications, identity verification, jobs, contracts, escrow, wallet, and user workflows, handling asynchronous states, errors, and data synchronization.
Developed an identity verification workflow that securely collects required user information, submits it through backend APIs, and reflects real-time verification status following administrative review.
Built comprehensive jobs and contract workflows, including paginated job listings with All/Recent/Matched tabs, offer acceptance/rejection, and project-based and milestone-based contract submission and resubmission.

Developed wallet and payment functionality, including balance management, deposit/withdrawal workflows, Flutterwave integration, backend payment verification, and a custom downloadable receipt-generation component.

Implemented a restricted-words moderation mechanism within chat that detects prohibited terms, prevents restricted messages from being sent, and provides contextual user warnings.

Optimized frontend performance and loading speed through efficient rendering, reusable components, asset optimization, and responsive implementation while contributing to portions of the platform's admin dashboard.

ATC - AFRICA

Remote

Frontend Web Developer . Part-time

Oct 2023 - March 2026

Architected and developed responsive web applications with Next.js, React, TypeScript, and Tailwind CSS, focusing on maintainability, performance, and scalable frontend architecture.

Designed and implemented data-fetching patterns with TanStack Query, leveraging caching, request deduplication, and server-state management to improve application responsiveness and reduce unnecessary network requests.

Translated high-fidelity Figma designs into accessible, responsive, and pixel-accurate interfaces across desktop, tablet, and mobile breakpoints.

Built reusable UI components and frontend patterns that improved consistency across projects and reduced development effort for recurring features.

Optimized page performance through efficient rendering strategies, asset optimization, and component-level improvements, contributing to strong Lighthouse performance across managed projects.

Collaborated with designers and stakeholders to turn product requirements into production-ready interfaces while maintaining a high standard of visual and technical quality.

JOJEGA - CONCEPT

Remote

Mobile App Developer(Flutter)

Jun 2025 - Dec 2025 .

Developed responsive, production-ready mobile interfaces using Flutter and Dart, translating product requirements and UI designs into reusable application components.

Implemented scalable state-management patterns using BLoC and Provider to separate presentation logic from application state and improve maintainability.

Built reusable Flutter widgets and navigation patterns that accelerated feature development and maintained UI consistency across the application.

Optimized mobile interfaces for smooth interaction, responsive layouts, and consistent behavior across different screen sizes.

SABO

Hybrid

Frontend Engineer & Shareholder (Equity)

Feb 2021 – Present (Paused)

Architected and developed the frontend of a real-time web chatting application using React, TypeScript, and Tailwind CSS, with emphasis on reusable architecture and responsive user experiences.

Engineered a USD-to-NGN currency conversion tool with precise calculation logic and dynamic data handling to support accurate financial conversions.

Built data-intensive dashboard interfaces with dynamic filtering, sorting, and optimized rendering to provide efficient interaction with large datasets.

Developed reusable components and shared frontend patterns that reduced implementation time for recurring features and improved consistency across the application.

Implemented frontend testing practices using test-driven development principles, achieving high test coverage across critical business logic and reducing regression risk.

Translated complex UI/UX designs into responsive production interfaces while optimizing rendering and page-loading performance across core application pages.

Diagnosed and resolved frontend bugs across application features, improving stability and maintaining consistent behavior across supported browsers and screen sizes.

SELECTED PROJECTS

FMI Dashboard – Finnish Maritime Intelligence

Next.js · TypeScript · MapLibre GL · REST APIs · Geospatial Data

Github: <https://github.com/Djsteplion/Finnish-Maritime-Intelligence>

Demo: <https://fmi-board.netlify.app/>

- Engineered a maritime intelligence dashboard that visualizes vessel movements, ports, icebreakers and maritime telemetry using interactive geospatial data.
- Integrated and transformed external maritime and environmental APIs into real-time dashboard metrics, vessel analytics and map-based visualizations.
- Built performance-conscious vessel rendering and dynamic data synchronization to handle large, continuously changing datasets.
- Developed interactive vessel, port and icebreaker views with filtering, analytics and detailed operational information.

CeloRaffle – Decentralized Raffle Platform

Next.js · TypeScript · Solidity · Celo · wagmi · Web3

Github: <https://github.com/Djsteplion/CeloRaffle>

Demo: <https://celo-raffle-pitch-deck.netlify.app/>

- Built a decentralized raffle application integrating wallet connectivity, smart-contract interactions and blockchain transaction workflows.
- Implemented transaction-aware UX for wallet connection, ticket purchases, confirmations, failures and on-chain state changes.
- Integrated blockchain data and AI-agent functionality into a responsive application interface.

Motifax – AI-Powered Visual Analysis Platform

Next.js · TypeScript · AI APIs · Image Processing · Tailwind CSS

Github: <https://github.com/Djsteplion/motifax>

Demo: <https://motifax.netlify.app/>

- Built an AI-powered visual analysis platform that processes uploaded images and generates structured analysis covering visual classification, motifs, symbolism and historical context.
- Engineered the image-upload and asynchronous AI-analysis workflow with validation, loading, error and result states.
- Designed structured interfaces for transforming complex AI responses into usable visual research output.

Food Zone – Full-Stack E-Commerce Platform

React · TypeScript · Node.js · Express · PostgreSQL · Prisma

Github: https://github.com/Djsteplion/Food_Zone

Demo: <https://food-zone-xum.netlify.app/>

- Built a full-stack e-commerce platform with authenticated user flows, product management, cart state, ordering and payment processing.
- Developed REST APIs with Express, PostgreSQL and Prisma for user, product and order management.
- Implemented dynamic menu rendering, CRUD workflows and API-driven frontend state synchronization.
